

LINK6000

CONNECTIVITY MODULE

FROM OFFLINE
TO ONLINE
IN AN INSTANT

Compatible with
VEGA VMS

CONNECT YOUR SYSTEMS REMOTELY
WITHOUT REPLACING A SINGLE DEVICE

From data to action, directly from remote

Link6000 is built on **two-way communication**: it doesn't just collect data from vending machines but it also lets you act on them remotely. Knowing what is happening across your installed fleet, stepping in when needed in real time, and planning operations more intelligently means optimising time, costs and resources without ever leaving the office.

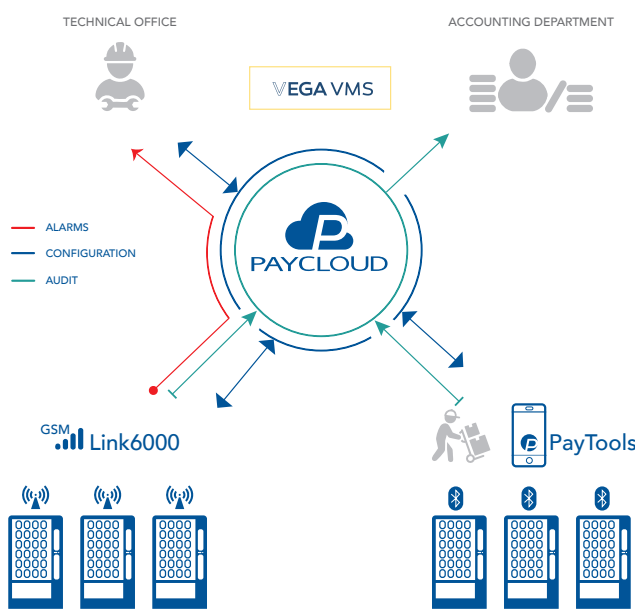

- ▶ Retrieve machine and payment system **audits**
- ▶ Receive machine notifications and alarms in real time
- ▶ Update **prices and discounts** remotely
- ▶ Read and update **configuration** files of Paytec systems

LINK 6000 CONNECTIVITY MODULE

Integration with ERP

PayCloud as a technology bridge

Link6000 integrates with the leading vending **ERP platforms**, including **Vega**, allowing you to operate directly from your own system. In this setup, **PayCloud** acts as a technology bridge, ensuring secure, structured communication between installed devices and the ERP. The data collected become a seamless part of daily operations, making machine planning, monitoring and management easier than ever. The continuous flow of data also enables **pre-kitting**: preparing restocking kits in advance in order to arrive at the machine fully ready and avoid wasted trips.

The device

Robust and ready to install

Equipped with a **4G modem with a multi-operator SIM card** and two serial ports, Link6000 connects to Paytec master devices for full audit and configuration management, but also to **vending machines and payment systems from other brands** to collect data, alarms and reports across your entire installed fleet, regardless of its composition. Installation is straightforward and requires no replacement of any existing equipment.
